Free learning. Shared possibility.

A GENTLE ROUTINE

Your first four weeks

Short, steady practice works best when the learner feels supported. Adjust the pace to your family.

1. Choose a comfortable level

Open Learn and select Preschool, Kindergarten, or Grade 1-6. These are starting points, not placement decisions. Read the goal together and move down a level if the lesson feels too difficult.

2. Separate siblings on a shared device

Use Manage learners to add up to four profiles. Generic nicknames such as Learner 1 are enough. Check Learning as before each session so the right learner receives the record.

3. Follow the four-step path

Week 1: the first lesson in each subject. Weeks 2-4: the next numbered lesson in each subject. Try three short sessions a week. Read, work through the example, do the activity, and discuss the practice feedback. Repeat whenever helpful.

4. Use the report as a conversation starter

Parent report shows dated attempts, reading minutes, and skills to revisit for the selected week. Three questions do not establish mastery or readiness. Ask: What felt easier? What should we try again?

5. Protect your records

Progress is saved only in the learning browser. In Parent report, create a snapshot link to send privately. Anyone with the link can read it. Use My routine to download a full backup. Restore it on another device when needed. Anyone with the file can see its records. Avoid full names and private information; keep backups in a place you trust.

After week four

Revisit difficult lessons, read library books together, and follow your school guidance. The For families page links to reading ideas and math skill references. Additional lessons and automatic parent access are future work.
